**PROBLEM**

How might we able to find a simple way to alert the forest fire in advance?

PROBLEM

How might we are going to setup the process in user friendly model?

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

🕐 10 minutes

MONICA B

Collect various datasets with high accuracy.	The web application should be available in all languages	Simple and easier user interface should be made
User need to have a seamless connection	Average temperature at which the fire will ignite is between 424 and 475	Monitor the project work.

DHIVYADHARSHINI S

Avoid the use of heating and spark producing for driedup vegetation	Drone water spraying system	Alert can be sent via alarm system and messages.
Gather the information from experts.	Camera monitoring system	The camera should have night vision to monitor in dark

PRATHIMA S

Visualize the hotspot	Maintains the histogram	Periodically update hotspot data
Alerts the user	Creates simple as well as clearheaded UI	Generates the monthly report

SARANYA K

Plot the mind map to track the activities.	Search for the relevant references and the data sets.	Improve the communicatiom networks
Keep the accurate yearly records.	Follow with a group discussion.	Track down the monthly activities.
